

AI in Government

AI-assisted ballot translator

Special thanks to **IBM SkillsBuild**

You're a voter...

presented with this ballot in the voting booth:

“Shall the Missouri Constitution be amended to:
Make the Constitution consistent with state law by
only allowing citizens of the United States to vote;
Prohibit the ranking of candidates by limiting
voters to a single vote per candidate or issue;
and Require the plurality winner of a political
party primary to be the single candidate at a
general election? State and local governmental
entities estimate no costs or savings.”

Team Alignment Map

Joint Objectives

Joint Commitments

Joint Resources

Joint Risks

Problem:

Voters struggle to vote on ballot measures because they don't have time to navigate all the informational complexities relevant to their perspective.

Voters need:

- Ballot measures in accessible language
- Ballot document Accessibility
- Simple to use website

Voters want:

- Ballot proposer's background/leanings
- Funding listings & simplification

Ballot data: [Ballotpedia](#)

Large Language Model (LLM):

- IBM watsonx.ai
- T5-small

Web search API: Google Serpapi

Embedding models: all-MiniLM-L6-v2
SentenceTransformer

UI: Gradio

- Ability to scrape data
- Issues with API accessibility
- Visualization issues

**Conclusion =
“Let’s build an AI-
Assisted Ballot
Translator!”**
